DETAILED ACTION

Allowable Subject Matter

1. Claims 1, 2, 4-6, 8-11, 13-16, 18, 20-22, 24, and 25 are allowed.
2. The following is an Examiner's Statement of Reasons for Allowance:

In interpreting the claims, in light of the specification and the applicant's amendments filed October 18th, 2005, the Examiner finds the claimed invention to be patentably distinct from the prior art of record. The prior art does not teach all of the limitations of the independent claims in combination with the other elements presented.

The prior art of record teaches Remote Direct Memory Access across a network and self-encapsulated transport level packets. The prior art also teaches the use of framing header information to create segmented packets to ease and improve data transfer (e.g. see cited art of Feldmeier). Segmentation is also used in the prior art to achieve data transfer when packet sizes exceed allowable maximums.

However, as per the claimed invention, the prior art fails to teach transport level segmentation that places a framing header in the body of the packet (rather than in the traditionally used header) and where the segments are split with direct memory address information based on the original transmission. This enables the individual segments to be placed directly into remote memory upon receipt, rather than requiring a costly recombination.
